measX Recertified as an NI Platinum Partner

Company celebrates 18 successful years of collaboration with NI as a domain expert.

Mönchengladbach, Germany – March 11, 2020 – measX, a developer of test and measurement systems and data management applications, today announced that it meets the necessary requirements to be recertified as a Platinum level member of the NI Partner Network program, an established global network of strategic partners.

measX has been a Platinum member – the program’s highest level – since 2002 and is proud to participate at this rank once again by meeting strict criteria, including certification of all employees, fulfilling standardized processes throughout the company and receiving certification from the Control Systems Integrators Association (CSIA).

“measX’s achievements in implementing complex and large-scale projects in different areas of measurement and testing technology are what distinguish it as one of our key partners in Europe,” said Fabio Cortinovis, NI EMEA regional sales director. “From developing and conducting the first Certified LabVIEW Architects training in the region to realizing successful projects in crash analysis and test data management, measX has proven itself to be a reliable partner capable of helping numerous NI customers find solutions to their engineering challenges.”

measX client solutions are based on NI software and hardware technologies, and its experience in various industries and critical research application areas has enabled hundreds of successful projects per year.

“Without the support of a strong and reliable company like NI, our success wouldn’t have been possible. Through our collaboration, we can help ensure the continuity required to serve our clients and support their success for the long term,” said Joachim Hilsman, PhD, measX managing director. “By focusing on the customer and working closely with NI, we can investigate current and future solution needs to provide valuable feedback to the NI R&D and sales organizations.”

NI Partners can be located through the online [partner directory](#) for expert help in solving automated test and automated measurement challenges. Currently, there are approximately 1,140 NI Partners worldwide, 16 of which are designated as Platinum members.

About measX

measX are experts for test cells and test data management with over 35 years of experience in system integration and software development. With approximately 60 employees and a strong partner network, measX develops, manufactures and delivers system solutions for quality assurance, from research and development, through to production and quality control. Our customers include numerous global automotive OEMs and suppliers, as well as companies in the chemical, electronics and energy business.

ADAS IIT-Innovation In Test, a cooperation with three partner companies, leverages expertise in advanced driver assistance systems (ADAS), sensor fusion, hardware-in-the-loop (HIL), V2X communication, GNSS simulation and data management to provide one-stop solutions for tests in development of automated driving vehicles.

About NI

NI (ni.com) develops high-performance automated test and automated measurement systems to help you solve your engineering challenges now and into the future. Our open, software-defined platform uses modular hardware and an expansive ecosystem to help you turn powerful possibilities into real solutions.

A National Instruments Partner is a business entity independent from National Instruments and has no agency, partnership or joint-venture relationship with National Instruments.
