measX Designated as an NI Platinum SystemLink™ Specialty Partner

measX uses NI's SystemLink software in its X-Frame Server, integrates into test rig solutions

(Mönchengladbach, June 3, 2020) measX, a developer of test and measurement systems and data management applications, today announced it has successfully integrated SystemLink software within its X-Frame Server for test data analysis.

"NI recognizes the value of connecting our data management software with partner expertise in developing and implementing the customer solution," said Jason Lanier, chief application software product planner. "Partners like measX are uniquely qualified to innovate by leveraging their proficiency with SystemLink and understanding of customer test system data management needs."

measX combines its experience in various industries and critical research application areas with NI software and hardware to enable hundreds of successful client solutions each year. measX's product, the X-Frame Server for test data analysis, uses SystemLink as well as DIAdem, NI's application software for post-processing measurement data.

"I'm proud to collaborate with NI. In a short amount of time, engineers on both teams have adapted this new technology to enable delivery of this solution to current and future customers. Every X-Frame customer can now easily migrate to the next generation of server-based data analysis. And that's just the beginning," said Martin Winkler, head of Test Data Management at measX.

"Customers with digital transformation requirements can now transition to a "just-use" development task," added Heinz Rottmann, head of Test Rig Technology at measX. "This capability helps us deliver industry standard-based solutions to the customer more efficiently."

Press Release

As an NI Platinum Partner since 2002 and an NI Migration and Services Specialty Partner since 2018, this additional distinction of Platinum SystemLink Specialty Partner highlights measX's long-standing commitment to NI and the customer value it provides through its technical expertise.

The NI Partner Network is a global community of domain, application and overall test development experts working closely with NI to meet the needs of the engineering community. To learn more and connect with an NI partner, visit ni.com/findapartner.

About measX

measX is an expert in test cells and test data management with over 35 years of experience in system integration and software development. With approximately 60 employees and a strong partner network, measX develops, manufactures and delivers system solutions for quality assurance, from research and development, through to production and quality control. Our customers include numerous global automotive OEMs and suppliers, as well as companies in the chemical, electronics and energy business.

About NI

NI (ni.com) develops high-performance automated test and automated measurement systems to help you solve your engineering challenges now and into the future. Our open, software-defined platform uses modular hardware and an expansive ecosystem to help you turn powerful possibilities into real solutions.

DIAdem, National Instruments, NI and ni.com are trademarks of National Instruments. Other product and company names listed are trademarks or trade names of their respective companies.

A NI Partner is a business entity independent from National Instruments and has no agency, partnership or joint-venture relationship with National Instruments.
