measX receives DASyLab source code license - own DASyLab version in planning

Moenchengladbach, Germany, June 03, 2025

The company measX GmbH & Co. KG as developer and main distributor of DASyLab now receives a source code license from NI/Digilent, now Emerson as owner of DASyLab. The already ongoing cooperation in development and sales will be further strengthened by this measure. With this license, measX plans to publish its own DASyLab versions in order to be able to react more flexibly to customer requirements.

measX GmbH & Co KG, a specialist in test bench technology and test data management and long-time main distributor of the DASyLab measurement technology software, recognizes the need to respond to the demands of industrial customers and is pleased that NI/Digilent, now Emerson, is supporting this step:

“Especially in Germany, the number of industrial customers is high and DASyLab needed a sign of continuity here,” says measX Managing Director and former Partner Manager Dr. Hilsmann. “By obtaining this license, NI/Digilent, now Emerson, is setting an example of a strong partnership and trust, and at the same time new paths are now opening up for us, which we are willing to pursue to the satisfaction of our customers,” he adds.

The source code license allows measX to develop and distribute its own DASyLab versions independently. New features or improvements can thus be added independently by the team in Moenchengladbach. It was also agreed that possible enhancements can flow back into the original version.

On August 13, 1998, the Datalog company, and with it the DASyLab product, was purchased by National Instruments. From parts of the resulting company National Instruments Services, today's measX GmbH & Co. KG was founded in 2006.

Digilent is a NI Company. NI recently was acquired by Emerson.

About measX GmbH & Co. KG:

measX is a recognized specialist for test bench technology and test data management. For more than 40 years, the company has been developing, manufacturing, and selling customized test systems for research, development and production. Well-known companies from the automotive and mechanical engineering industries as well as the chemical, electronics and energy sectors rely on measX's technological competence and expertise.

The focus within test bench technology is on automated measurement and test systems, retrofitting, in-house tailored electrical connectivity, and pre-conditioning solutions as well as developing and building specialized measurement equipment in small series. measX is a proven LabVIEW specialist and main distributor of the "easy-to-use" metrology software DASYLab. In the area of test data management, measX creates data management applications and evaluation systems that help customers to make comprehensive use of acquired test data and therefore informed decisions. The in-house developed data management and analysis software X-Frame can be used across industries with all kind of data.

The X-Crash analysis system from measX is the world's leading software for evaluating vehicle safety tests and a binding standard of Euro NCAP. The MOSES software specializes in vehicle dynamics tests.

At the company's locations in Moenchengladbach and Aachen, more than 60 employees work for customers in Germany, Europe and beyond.

measX is a long-standing Alliance Partner of NI (National Instruments, now part of Emerson), an active member of committees such as AMA Fachverband für Sensorik e.V., ASAM e.V. and the Arbeitskreis Messdatenverarbeitung Fahrzeugsicherheit (MDVFS). As a partner of universities and colleges, measX sees itself as a bridge builder between research and industry.
